# How to use GEOPDFs

1. Open the PDF and select tools – object data – object data tool
2. Click on the layers, this will open up the layers displayed on the PDF.

3. Click on the plus icon on 'layers' and this will open all layers. By clicking on the eye symbol you will be able to turn on/off any layers you want.

To get more detail from the layers in your map, with the object data tool on, click on the map three times and the 'Model Tree' will appear. Use this by the example below and you will be able to look at the extra data behind the layer
